PROFILE

A **Software Engineer** specializing in scalable Go services. I have also worked on devops, finops, cloud platforms, data pipeline and very occasionally on frontend engineering. As a budding homelab enthusiast, I spend my free time self-hosting services to deepen my understanding of networking and learning new technology.

PROFESSIONAL EXPERIENCE

Senior Software Development Engineer

04/2023 – present

Converj Global Private Ltd

- **Engineering Leadership:** Spearheaded the development of a high-scale payments platform, managing **40+ Go backend services** integrated with payment gateways, ERPs and multiple vendors for seamless onboarding, communication, analytics, invoicing etc
- **Data Architecture:** Designed a **cloud-native transactional data lake** using AWS services and Apache Iceberg; optimized analytics pipelines for **50k+ companies**, achieving a **78% reduction in processing time** and **63% lower storage costs**.
- **Cloud FinOps:** **Slashed monthly GCP expenditure by 91%** by right-sizing over-provisioned infrastructure, optimizing machine families and migrating some managed services to self-hosted GKE resources and lesser tier resources for dev environments.
- **CI/CD Optimization:** Accelerated deployment velocity by **reducing CI/CD(Tekton) runtimes from 15m to <4m** through the implementation of Go module and build caching.

Database Administrator

10/2018 – 05/2020

Tata Consultancy Services

- Managed 1600+ MS-SQL instances, ensuring uptime, maintenance, security and performance.
- Reduced false alert tickets by **70%** by tuning thresholds based on historical alert data.
- Deployed **Foglight** (monitoring tool) across 1000s of servers and multiple domains, which helped identify recurring issues and led to **35% reduction** in high-priority tickets.

PROJECTS

BookSpot

Go, gRPC, Kafka, Postgres, Docker, Kubernetes

- Engineered a **microservices-based backend** architecture inspired by a manga/comic reader application
- Built 3 **Golang** microservices with both synchronous (**gRPC, HTTP**) and asynchronous (Kafka) communication
- Developed reusable **Go libraries** for middleware, logging, error handling, **JWT authentication, Kafka** and **PostgreSQL** clients
- Implemented **OpenTelemetry** and **Jaeger** based observability and **OpenAPI** based API documentation.
- Containerized the entire system using **Docker Compose** for local development and **Kubernetes manifests** and **Helm charts** for deployment.

Student Result Management System

Java Swing, AWT, JDBC, MySQL

- Developed a Desktop app to manage student data and results analytics with a robust **RDBMS** schema.
- Designed a responsive and feature rich UI with **Java Swing** and **AWT**
- CRUD functionality for students, scores, users + Role Based Access Control(RBAC)
- support for local/remote database(**MYSQL**) for flexible deployment

SKILLS

Languages — Go, Python, SQL | **Databases** — PostgreSQL, MS-SQL, Redis | **DevOps & Cloud** — Docker, Kubernetes, AWS, GCP, CI/CD (tekton), Terraform | **Messaging & Architecture** — Kafka, gRPC, REST APIs, Event-driven, Microservices | **Tools & Testing** — Git, Unit Testing (Testify, Go test, Mockery)

CERTIFICATES

- Google Data Analytics Certification - Google [↗](#)
- Certification Program in Data Analytics - Edubridge [↗](#)
- Full Stack Development Course - Acciojob
